

OCHOA FRANCO

INFORMATION SYSTEM'S
STUDENT

SKILLS

Java Hibernate Spring Boot MySQL GIT

JAVA

Through this language, the development of a Dominoes game on a console (simulated with Swing) was carried out, applying all the concepts of OOP as well as the Observer and MVC design patterns

SPRINGBOOT - HIBERNATE

I completed a course at TodoCode Academy where I learned how to build REST APIs from scratch, using Hibernate as the ORM and SQL as the database, as well as Maven for managing project dependencies. I am currently working on projects to deepen the concepts I have learned.

SQL

This language was used to apply the knowledge gained in the Database course, where, based on a system information survey report, the conceptual and logical design was created (ER Diagram), followed by its implementation in SQL.

GITHUB

In collaboration with my university team, we implemented an organized approach to manage changes in our code and maintain smooth communication through this technology. It is a technology that I use in every project I get to work on.

ENGLISH- UPPER INTERMEDIATE

I have a B2 level of English and have been studying the language for 4 years. I am proficient in all aspects, including listening, writing, speaking, and reading. Additionally, I have experience interacting with native English speakers, as I regularly participate in meetings with them where we discuss various topics.

SPANISH- NATIVE SPEAKER

SOBRE MI.

I consider myself a passionate individual with a strong interest in backend development. I am currently in my third year of the Information Systems career at Universidad Nacional de Luján, Argentina, where I have had the opportunity to learn about databases, data structures, algorithms, and system design. This knowledge allows me to not only build systems but also understand clients' requirements to create efficient solutions.
